Release Notes for Quarter 1, 2022

The Teladoc Health Product Management team remains committed to providing continued improvements and enhancements for our solutions and services to support the growth of your telehealth programs. These release notes include the details of all release content delivered during our Q1 release.

The Teladoc Health Solo™ Platform releases do not align to a calendar quarter. The Q1 engineering development continued through the second week of April.

Below are highlights of recent and planned product releases and a brief highlight of new features and updates to the Solo™ Platform.

Q1 2022 Solo Platform Releases

Web App

Web Provider and Patient Apps: The Teladoc Health Web Provider and Patient App releases occur every two weeks. The primary focus for this quarter was to improve the Patient experience by aligning the Patient App with that of the Care Location App user experience and improved Audio controls for clients. The last bi-weekly update will occur April 15, 2022 in client test environments and April 19 in production. All enhancements behind a release toggle are enabled in client test environments biweekly and will be enabled in all production environments May 24, 2022.

Mobile App

iOS Provider and Patient Apps: Teladoc Health iOS Provider and Patient Apps is available in the App Store as of the **week of March 2, 2022** with a new Fit to frame and Fill frame video enhancement. The schedule for whitelabel Clients will follow the general release.

Desktop App

Desktop Provider and Patient Apps: Teladoc Health Desktop Provider and Patient Apps will be available to push to all clients who are using the auto update version of the app starting the **week of February 22, 2022** with the new auto-update capability.

Smart Notes Module

The Teladoc Health Smart Notes Module releases occur every two weeks. The primary focus for this quarter was the ability to add amendments to signed consult notes and to add addendums to encounters. The last bi-weekly update will occur April 15, 2022 in client test environments and April 19 in production. All enhancements behind a release toggle are enabled in client test environments biweekly and will be enabled in all production environments May 24, 2022.

Analytics Portal

AV Quality Survey Results Dashboard: Teladoc Health AV Quality Survey Results Dashboard will be available to all clients starting **March 8, 2022** providing improved views into client mandatory survey results for better user insight.

Solo with Teams V1.0 (US ONLY)

The Teladoc Health Solo platform enables practices to configure how they integrate with Microsoft Teams.

Connected Devices

Teladoc Health **Connected Devices** release of the Windows devices software, Windows Provider Access, iOS Provider Access and iOS Viewpoint will roll out **Beginning March 16, 2022**. Improvements include:

- **Windows Device Software** (includes Win Viewpoint Software): The new release of the Windows Device software includes support for the EKO Bluetooth Stethoscope with persistent pairing.

- **iOS Viewpoint Software:** The new release of the iOS Viewpoint provides an improved first time Authentication experience.
- **Windows Provider Access Software:** The new release of the Windows Provider Access software allows Providers to connect to a device in the Experience Center for demo and training purposes.
 - **Discontinuation Notice:** The Q1, 2022 release of **Windows Provider Access** software, version 44.3x, will be the last version to support **Windows 10 32-bit OS**. While Windows 10 32-bit OS computers can use version 44.3x for up to one year, those computers will not be able to install future versions of Windows Provider Access software.
- **iOS Provider Access Software:** The new release of the iOS Provider Access software presents users with the Apple default interface when they receive a phone call while in an existing iOS PAS session (End & Accept, Send to Voicemail, Hold and Accept).

Browser Support

As part of our Quarterly release, Teladoc Health revises the list of supported browsers and versions. Changes to the supported browser list for the Q1 release are identified below and will be enforced in the production environments on **April 19, 2022**.

Browser	Current Support	Support Starting January 18, 2022	Operating System
Chrome	86	90	Chrome 86 Mac OS 10.14 and later, Windows 7 and 10, and Android v7.0 and later
Safari	14	14	Max OS 10.14 and later, and iOS 12.1 and later
Firefox	78	78	Windows 7 and 10
Edge	88	88	Windows 10

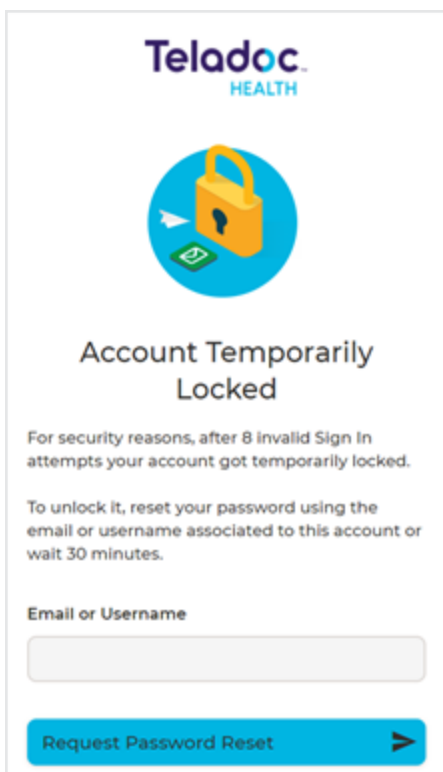

Solo™ Platform

Platform Enhancement

Browser Support: IDA/Electron, Chrome, Safari-MAC, Firefox, and Edge.

User Account Lockout: The number of failed login attempts before an account gets locked was reduced from 12 to 8. When a user is trying to log in and has 8 consecutive incorrect login attempts, the system will lock that user's account for 30 minutes.

Key	Component	Version	Operating System
CORE-5134	Solo Platform	2022.2.2	MacOS, and Windows - 32bit and 64bit.
Release Toggle: None			

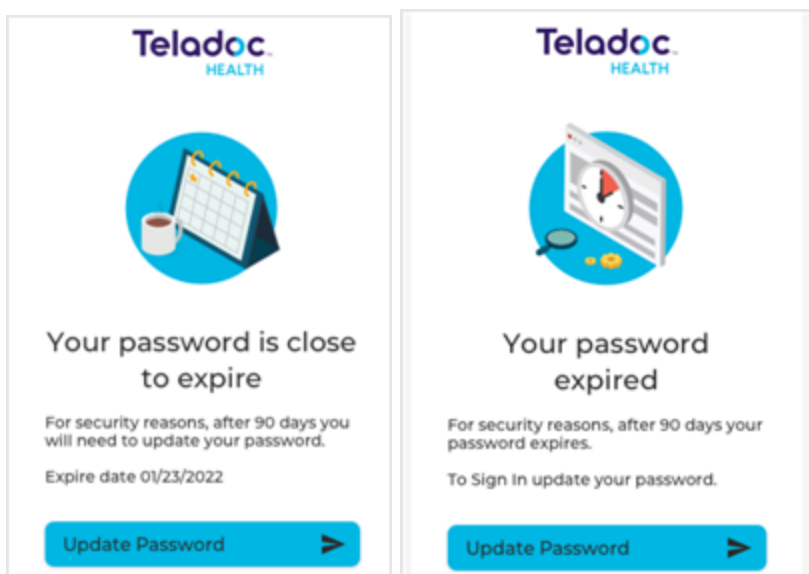

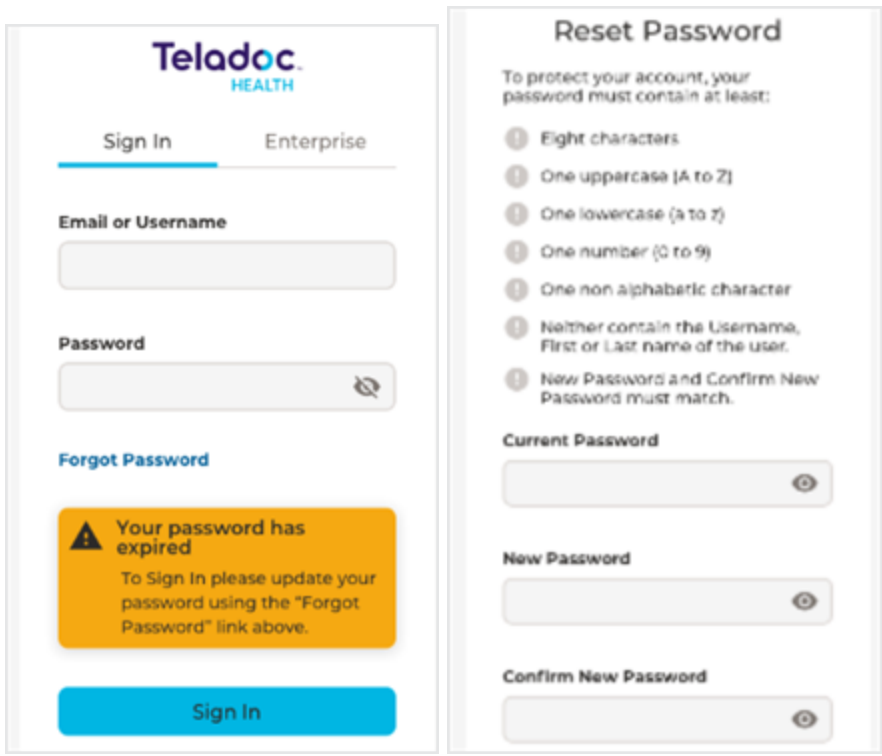

Password Reset- Spam prevention: In order to prevent spam and automated attempts of starting the work flow, the password reset validates when a human is interacting with the page. This feature is transparent to users.

Key	Component	Version	Operating System
CORE-2857	Solo Platform	2022.2.2	MacOS, and Windows - 32bit and 64bit.
Release Toggle: None			

Enforced Password Expiration: For users who sign in to Solo through the regular authentication method, they will be forced to update their passwords every 90 days in compliance with the industry security standards. The feature will be disabled by default. To enable it for your account, contact your Account Manager.

Key	Component	Version	Operating System
CORE-2233	Solo Platform	2022.2.2	MacOS, and Windows - 32bit and 64bit.
Release Toggle: None			

New Visit Screen: The current layout for the **New Visit** screen has been redesigned.

- to improve the user experience with more options to select patient devices.
- to improve icons for a better user experience
- to add information text for each connect option
- to **Connect** using visual identification from a virtual encounter using the updated **Confirm** button for **My current device**.
- provide control of **Patient Will Connect through** option on the Service level.
- select the device patients are allowed to connect with their personal device. Use **Service Settings -> General Settings -> Patient Will Connect Through**.

Key	Component	Version	Operating System
TC-9708	Solo Platform	2022.3.1	MacOS, and Windows -

Key	Component	Version	Operating System
			32bit and 64bit.
Release Toggle: PatientWillConnectThroughServiceSettings			

Drop-down menu

The screenshot shows a 'New Visit' form with several sections:

- Patient Name:** Konstantin Test
- Visit Service:** My Device
- Location:** Select Location
- The Patient Will Connect Through:** Patient's Personal Device (highlighted with a red box)
- Provider:** Select Provider
- Date:** 03/11/2022
- Start Time:** 18:40
- End Time:** 18:55
- Interpretive Service:** Preferred Language
- More Options:** View More

On the right side, there is a patient summary for 'Test, Konstantin' with a list of visits and a 'Show All' button.

Enable toggle in Services

The screenshot shows the 'General Settings' page with the following settings:

- Patient Will Connect Through:** Enabled (toggle is on)
- Hours of Operation:** Enabled (toggle is on)
- Reasons:** Disabled (toggle is off)
- Visit Window:** Disabled (toggle is off)
- Patient Notifications:** Disabled (toggle is off)
- TigerConnect Notifications:** Disabled (toggle is off)
- Mayo Paging Notifications:** Disabled (toggle is off)
- Permission to Enter:** Disabled (toggle is off)

On the right side, there is a section titled 'Patient Will Connect Through' with a list of devices:

- Patient's Personal Device
- My Current Device
- Care Location

Solo with Teams v 1.0 (U.S. Only)

The Teladoc Health Solo platform enables practices to configure how they integrate with Microsoft Teams.

When enabled, your providers can:

- Start telehealth appointments (i.e. virtual encounter) for your practice using Microsoft Teams.
- Run telehealth appointments using Microsoft Teams
- View your Solo practice, including the patient queue within a Microsoft Teams App. Your Microsoft Teams admin should install and pin the App.
- View the patient profile securely using the Solo App during Team appointments.
- Patients join using the Solo intake experience and attend their appointment using a web browser without the need to install Microsoft Teams.

The Solo with Teams App requires a Solo practice enabled for Microsoft Teams and a Teams account. Reach out to your account manager to enable the integration. Then, the App is installed by your Microsoft Teams tenant admin. More information about the Solo with Teams App is viewable at: <https://teladochealth.com/solo-teams/>

Tickets:

- ACS-2 Solo in Teams app
- ACS-3 Teams sessions from Solo
- ACS-12 Solo with Teams app tabs for Solo links
- ACS-9 Solo navigation when embedded into Teams
- ACS-159 ACS Patient App

Schedule visits

Form fields:

- Patient Name: Bob Armstrong
- Visit Service: Select Service
- Date: 12/09/2021
- Start Time: 06:05 PM
- End Time: 06:20 PM

View queue

Patient Name	Age	Gender	Reason for Visit	Wait Time
Armstrong, Bob	79	Male	Hip Surgery Followup	1 min Waiting
Rodriguez, Claire	36	Female	Anxiety	7 min On call
Bright, Julian	84	Male	Hypertension	6:00 pm Scheduled
Larsen, Violet	78	Female	Back Pain	8:10 pm Scheduled
Harrison, Alexander	36	Male	Itch	20 min Complete
Ripley, Cedrick	42	Male	Joint Pain	23 min Complete

Start appointments

The screenshot displays the Teladoc Health patient management interface. The main area shows a list of appointments for 'Today'. The appointments are as follows:

Patient Name	Reason for Visit	Appointment Status	Time
Armstrong, Bob (Age 79, Gender M)	Hip Surgery Followup	On Hold	1 min Waiting
Rodriguez, Claire (Age 56, Gender F)	Anxiety	On Hold	1 min On-call
Bright, Julian (Age 84, Gender M)	Hypertension	On Hold	5:00 pm Scheduled
Larsen, Violet (Age 78, Gender F)	Back Pain	On Hold	5:00 pm Scheduled
Harrison, Alexander (Age 36, Gender M)	Rash	On Hold	20 min Complete
Bipley, Cedrick (Age 62, Gender M)	Joint Pain	On Hold	20 min Complete

The right-hand panel provides a detailed view for 'Armstrong, Bob'. It includes a 'Continue' button, a 'Start New Note' button, and a section for 'All Encounters (30)'. The selected encounter is 'Hip Surgery Followup' on 06/25/2021 at 4:25 pm EST, located in Austin, TX. There is also an 'Imaging' section showing a 'Hip Image' from 06/25/2021 at 01:25 pm EST, and a 'Documents' section.

Provider App

Web Provider App

The Web Provider App is a browser-based App used primarily for scheduled and on-demand low and medium acuity care.

Browser Support: Available on Chrome, Safari, and Firefox.

PHI Information: When a patient leaves their video-call screen during a session (virtual encounter) while waiting for their session to begin, unintentional sharing of their PHI information is blocked by locking links to their demographic and visit details in the right panel for **My Current device** visit types.

Key	Component	Version	Operating System

Please wait for your medical professional.

When you are eventually taken into a session you will likely be asked by your browser to allow access to your WebCam and Microphone.

Please allow this as quickly as possible to begin your session. Have a great day!

Live Chat With Support

New

The screenshot displays a patient dashboard for 'Yulia'. On the left, there are three 'Emergent request' cards, each with a yellow warning triangle icon, 'Care Location WTest0', and 'Yulia PractitionerAdmin'. Below these is a card for 'd, yul' with 'Location Yulia_Loc1' and 'Care Location WTest2'. A date separator 'april 11' is present. The visit history shows three entries: 'unknown, Yulia' (10:35 AM Scheduled), 'Y, Yulia' (01:51 PM Complete), and 'Dovnar, Yulia' (10:35 AM Complete). On the right, a patient profile for 'unknown, Yulia' is shown with fields for Gender (F), Age (28), DOB (03/05/1994), and MRN (47654654). Below the profile are sections for 'Email' (yulnar94+979@gmail.com), 'SMS' (+1 (234) 234), 'Documents' (No documents attached), and 'Attachments' (No documents attached to this encounter). A 'Live Chat With Support' button is at the bottom right.

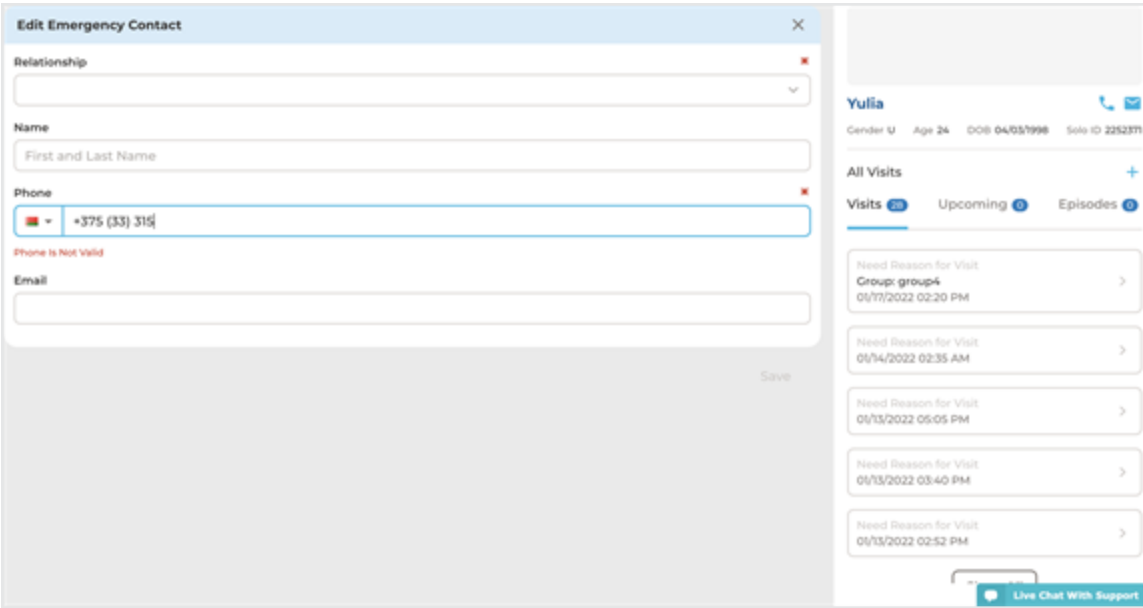

Old

The screenshot shows a virtual visit interface. The main area is dark with a large grey silhouette of a person. On the right, an 'Add Participants' sidebar is open. It has tabs for 'Invite', 'Interpreter', 'Present', and 'Patients'. Below the tabs is a search bar 'Enter Healthcare Provider Name'. A link 'https://patient.visitsta...' is shown with a 'Copy' button. A message reads: 'You are being invited to join an online virtual visit with a yulia provider. This may have been at the request of a patient who wanted you to be included in their visit. Click the link below to launch and join the visit.' Below the message are input fields for 'Email Address' and 'Phone Number' (+37533), each with an 'Email' or 'SMS' button. At the bottom, there is a navigation bar with icons for settings, participants, mute, video, close, share, add, chat, help, and home.

Session time: Session time is configurable at the organization level (from 10 to 180 mins, default session time = 30 mins). User activity is tracked on browser events: mouse movement, keyboard typing, and screen tapping. An Information popup is displayed before the session end and an information message displayed after a user is automatically logged out.

Release Toggle: PatientNotificationsForPrimaryContactsChange			

The screenshot displays the TruClinic interface for a patient named Teladoc, Konstantin. The left sidebar contains navigation links: Dashboard, Queue, Schedule, Care Locations, Patients (highlighted), Analytics, Encounters, and Services. The main content area is divided into sections for patient details: Country (dropdown), State (dropdown), City (input), Zip Code (input), Phone (with a dropdown for country and a 'Type' dropdown set to 'Home'), and Email (with a 'Type' dropdown set to 'Home'). Below this is the 'Race & Ethnicity' section, with 'Race' options including American Indian or Alaska Native, Asian, Native Hawaiian or Other Pacific Islander, Black or African American, White, Other Race, Abenaki, Absentee Shawnee, Acoma, Afghanistani, African, African American, Agdaagux, Agua Caliente, Agua Caliente Cahulla, Ahtna, and Other. The 'Ethnicity' section has options for 'Hispanic or Latino' and 'Not Hispanic or Latino'. At the bottom, there is a 'Preferred Language' search bar. The right sidebar shows 'All Visits' with a list of visits, each with a 'Need Reason for Visit' link and a timestamp. Below the visits is a 'Show All' button. The 'Documents' section lists documents with titles and timestamps, including 'VI 04/05/2022 14:45', 'TC12224 03/21/2022 16:35', and 'Consent to contact you for MyVirtualVisit !!! 03/14/2022 17:07'. A 'Patient Health Questionnaire PHQ-9' document is also listed. A 'Live Chat With Support' button is at the bottom right.

Output Device Preference: Users of the Chrome or Edge Browser and of the Provider and Patient for Windows or Mac (DAS) App can select the speaker or headphone preference for their output device while in a session (i.e. virtual encounter). This feature increase the usability of selecting a preferred output device as an alternative solution to switching between the Windows or MacOS device properties menu.

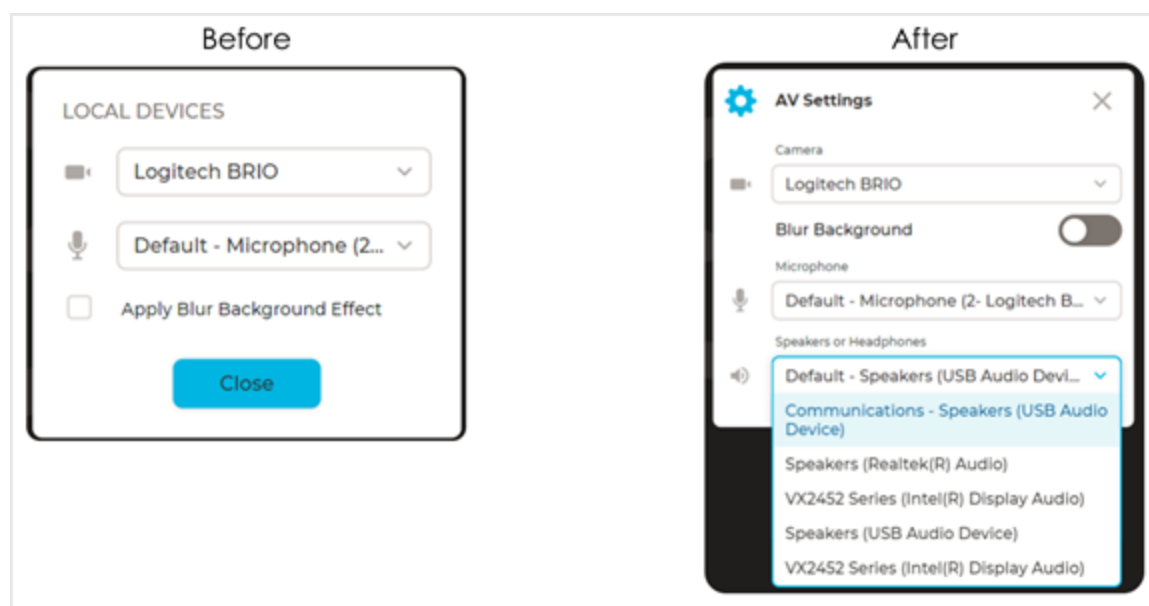

Key	Component	Version	Operating System
WPAS-1331	Web Provider App, Web Patient App, Desktop Provider App, and Desktop Patient App	2022.1.2	MacOS Windows - 32bit Windows - 64bit

Release Toggle: OutputDeviceSelection

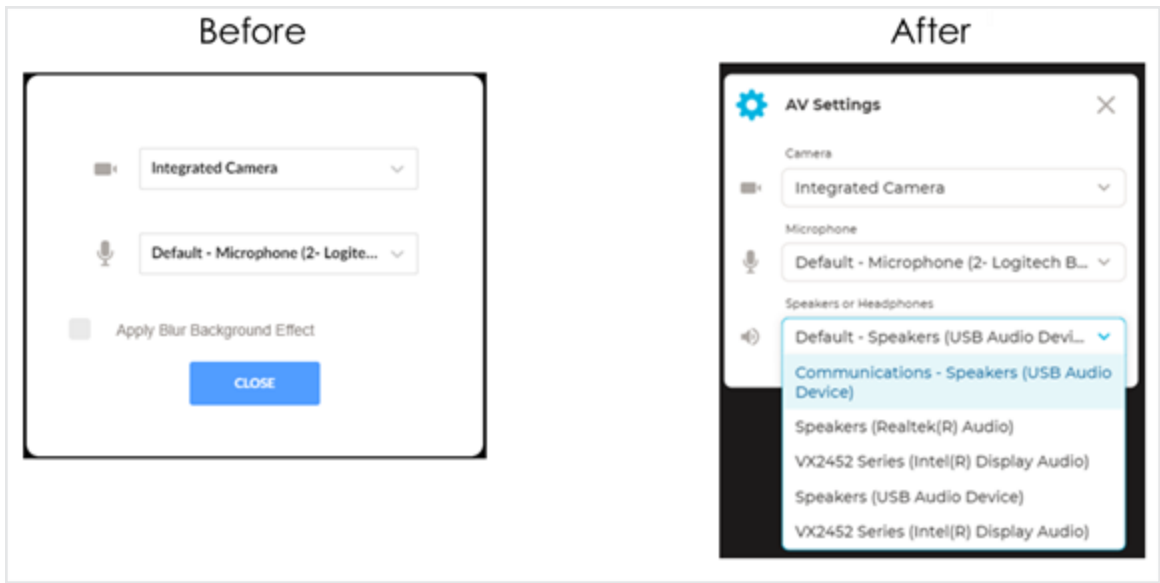

Blur Background: A provider can save their last used blur background setting for their next virtual care encounter. When a provider enables blur background on a supported device, the provider's preference is saved as part of their user profile. Then when the provider engages in a virtual encounter from their device, blur background is enabled. If the provider turns off blur background, then the next sessions (i.e. virtual encounter) will have blur background disabled. .

Analytics

A new release of the Teladoc Health Analytics module will be pushed to all clients February 28, 2022 with further enhancements to our datasets.

The Mandatory A/V Survey is available through SSRS (free) and the Analytics Portal. The Tableau functionality has been updated to 2021.4 and default date ranges updated to 10-01-21 thru 12-31-21 for all workbooks The new AV Quality Survey Results dashboard allows you to view your mandatory (thumbs up vs thumbs down) survey results to add color, context, and sentiment to better understand the 'why'. This contextual data leads to more in-depth insights and drives better decisions through your organization. The following metrics are visualized:

1. Total survey count split up by Provider, Patient, and Guest
2. Provider, Patient, and Guest Survey Results
3. Top 5 Good vs Bad Provider Ratings
4. Top 5 Good vs Bad Waiting Room Ratings
5. Top 5 Audio and Video Quality Reasons
6. Good vs Bad Calls Trended Monthly
7. Raw Survey Results for Greater Analysis

Smart Notes

Smart Notes is used to overcome barriers in documenting virtual encounters. Smart Notes users easily select standardized apps built with conditional logic, or unique workflows to meet their clinical documentation needs.

Browser Support: IDA/Electron, Chrome, Safari-MAC, Firefox, and Edge.

A practitioner user who manages multiple stroke virtual encounters, can input data into an amended or addended modal. They can then click away from the modal, and have their data saved so that when they return to the modal, their previous input fields are still there for the practitioner to continue a consultation note.

Smart Notes Amend/Addend

Smart Notes 4 supports the ability to add amendments to signed consult notes and addendums to encounters. Prior to this, users were only provided with a single text field to add an addendum, which would appear at the top of the signed note.

The screenshot displays a user interface for adding an addendum to a signed consult note. On the left, a dark grey box is labeled 'Text of Addendum'. Below it is a text input field containing the text: 'this is an example of how an addendum is currently added to a signed consult note'. To the right of the input field is a 'Sign Note' button and a 'Cancel' button. On the right side of the interface, a preview of the consult note is shown. The note content includes:

- Clinical Impression/Consult Type**
 - Clinical Impression/Consult Type: Ischemic Stroke
 - Thrombolytic Decision: Yes
 - Thrombolytic Recommendation: 12/13/2021 1:59 PM PST
 - Thrombolytic Agent: Alteplase
- Thrombolytic Decision Making**
 - Indications: Clinical diagnosis of ischemic stroke causing measurable neurologic deficit. Onset of symptoms less than or equal to 4.5 hours prior to treatment
 - Contra indication: MCI non-disabling stroke
 - Precautions: Glucose less than or equal to 50 or over 400 mg/dL.
- Alteplase Treatment Plan**

At the bottom of the note preview, it shows: 'Electronic Signature: Cassin, MD, Chis on 12/13/2021 at 2:05 PM PST' and 'Acute Neurology Consultation Note Page 1 of 3'.

Ability to Amend a Signed Consultation Note

After a consult note is signed, the form becomes locked and is no longer accessible for practitioners. Instead, practitioners can make corrections and late entries through the amendment feature, which can be accessed through the **Add Amendment +** button located in the bottom, right corner of the screen. Fields displaying in the amendment modal MUST be referenced from the original form, which is configured in the same form. JSON is added to the Practice in the Super Admin App (ask your implementation specialist for details). When the amendment modal is displayed to the practitioner, it is pre-populated with the most recent updated field data. Then, once a user selects the appropriate action of either **Correction** or **Late Entry**, they can overwrite what is displayed, review and sign the amendment. Once electronically signed, amendment changes appear inline with the red strike through of the previous and overwritten data on the PDF.

NOTE: Only the originating practitioner can add amendments to their own signed consultation notes. Conditional logic for Amendment provides for more detailed documentation support.

Add an addendum(s) to a signed Consult Note

In addition to amendments, originating or secondary practitioners can add addendums to a virtual encounter. Addendums are additional PDF documents that can be configured to include fields from the primary form. After an addendum is signed, a PDF documented is created and attached to the same encounter, which then can be accessed from the left panel.

NOTE: Any new unsigned addendums are automatically saved as drafts and be accessed by practitioners at a later time. Smart notes supports up to 5 addendums. Addendums also support conditional logic for detailed documentation.

Teladoc Teleneurology is a consultative service supporting the local providers for this patient. Relevant patient information, acquired through discussion with emergency providers, independent assessment, and review of the local EMR, is to be shared with the teleneurologist at the time of consultation request. The Acute Teleneurology team should be contacted with any neurologic worsening or clinical changes, new test results, or new patient history that is reported to or discovered by the local team following completion of the teleneurology consultation, specifically that which has the potential to impact the consultative recommendation.

Any patient complaint or grievance by the collaborating hospital should be reported to your appointed Physician Services Account Specialist. The grievance will follow the process outlined in the Teladoc Health Teleneurology Quality Management Plan.

[Review and Sign](#)

After signing an addendum note

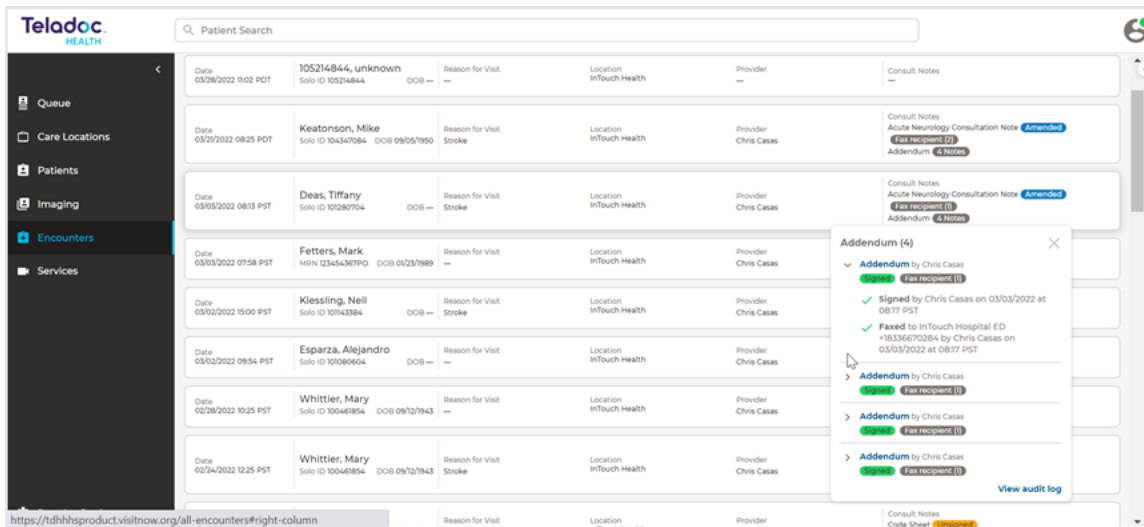

The screenshot displays a medical dashboard interface. On the left is a vertical navigation menu with categories such as 'History of Present Illness', 'Patient History', 'NIHSS & Neuro Exam', 'Imaging Documentation', 'Labs', 'Clinical Impression/Con...', 'Medical Decision Making', 'Plan/Recommendations', 'Billing & Codes', 'Call Center Details', 'QA Process', and 'Notes'. The 'Notes' section is expanded, showing a list of notes with status icons (checkmarks, exclamation marks) and timestamps. The main content area shows details for an 'Addendum' by 'KEATONSON, Mike'. It includes patient demographics (DOB: 09/05/1950, Gender: M, Age: 71, Location: InTouch Health, Care Location: Demo-Lite 4 (Emergency Room)) and a table of clinical data:

CPT Code	99446, Interprofessional telehealth consultation, 5-10 min (phone only)
Clinical Impression/Consult Type	Ischemic Stroke

At the bottom of the dashboard, there is an 'Add Note' button and a 'Send by Fax' button.

Encounter Dashboard Consult Note Status

Amendments and Addendums are reflected on the **Encounter** dashboard with updates to the consult note status. Clicking on the Amended badge will display the details, including the time and name of practitioners. Clicking on the Addendum badge will list all of the consult notes, including the ability to expand to view further details, such as time, name of practitioner, note status, and fax status.

Encounter Dashboard Filtering

The filter panel on the **Encounter** dashboard has been updated for Amended notes and Addendums. Under the note status filter, users filter for amended notes.

NOTE: The Consult Notes filter includes Addendum notes that can be selected to display only encounters with one or more addendum notes.

Fax and Auto-faxing

Users can auto-fax an amended consultation note.

Users can auto-fax saved demographic updates.

Addendum Label Configuration

The name of the Addendum label can be configured to display throughout the application and in the headers of the consultation note.

Connected Devices

Patient-Side Devices and Software:

- Innovative telehealth devices provide best-in-class audio and video communications for patients in healthcare environments to receive high-quality healthcare through virtual consults when and where it is needed.
- Standalone Windows/iOS Viewpoint software are available for hospital system IT staff to download and standup telehealth endpoints on owned devices.

NOTE: If your device experiences interruptions while upgrading to the latest release, contact the Technical Assistance Center at tac@teladochealth.com or 877-484-9119.

Robot

The robot items relate to all devices.

Provider Microphone: Devices, such as Demonstration units in the Teladoc Experience Center, can be configured to begin sessions (i.e. virtual encounters) with Provider's microphone muted.

Key	Component	Version	Operating System
ROBOT-3894	Robot	44.36	iOS
Release Toggle: None			

Eko Bluetooth Stethoscopes Paired: An Eko Bluetooth Stethoscope can be paired 1 to 1 with a device and saved as a bound-pair. A technical support specialist will first need to disable the setting **Allow any Eko stethoscope**. The stethoscope setup page will then be the stethoscope to use for virtual encounters.

iOS Provider Access Software

The iOS Provider Access software is used for scheduled and on-demand care.

Apple Default Interface: Users are now presented with an Apple default interface when they receive a phone call while in a session (i.e. virtual encounter) using iOS PAS ("Provider Access software). Users are presented with three options when they receive the phone call:

1. **End & Accept:** This will end the session in iOS PAS and accept a phone call
2. **Send to Voicemail:** This will send the incoming phone call to voice mail.
3. **Hold & Accept:** This will put the iOS PAS session on hold and start the phone call.

When the user selects **Hold & Accept**, they are taken to the Apple default interface where they can manage two different calls at the same time. In this interface at the top, they can see the active call and the call on hold.

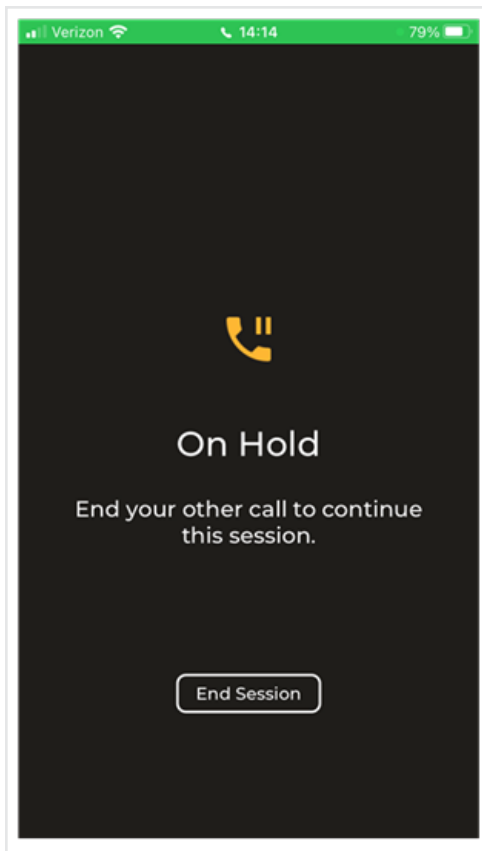

Through this interface, users can swap between the two calls.

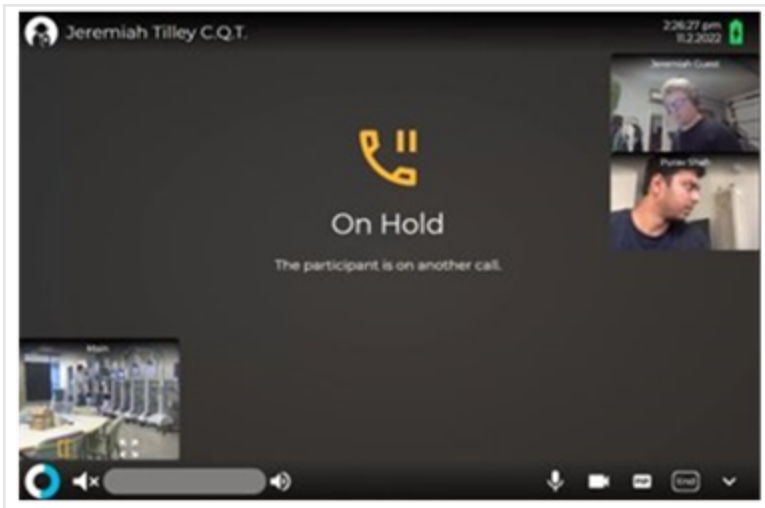

Users can mute or unmute their microphone through this interface when they are in an active session with the iOS PAS. Users will be directed within the App when they click on the **Provider Access** icon on this interface.

When the user has put the iOS PAS session on hold while attending another phone call and then opens the iOS PAS App, they will be presented with an **On-hold** message. The user won't be able to resume the session in the iOS PAS until they end the other ongoing phone call through the Apple interface.

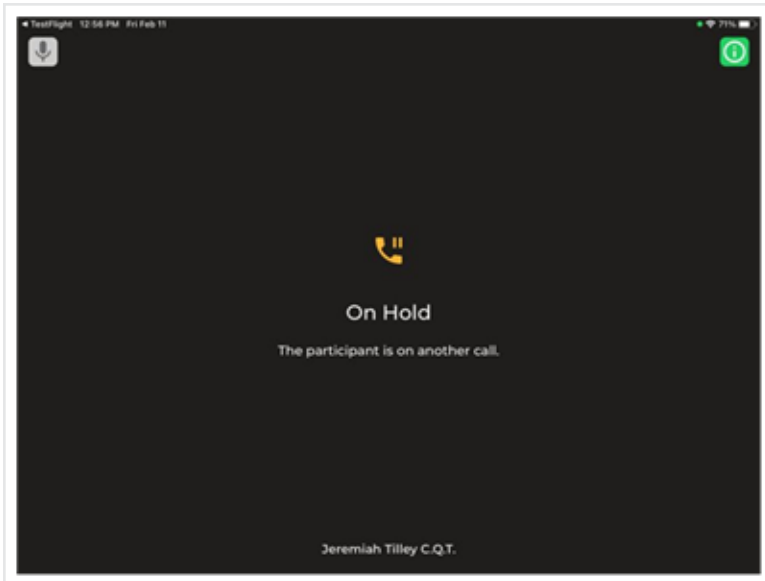

At this time, other users in the iOS PAS session will be presented with a message of On-hold until the user resumes the call.

A user on the Robot side will be presented with an **On-hold** message on the main view or in the thumbnail depending on the role of Host or Guest of the user who went on-hold.

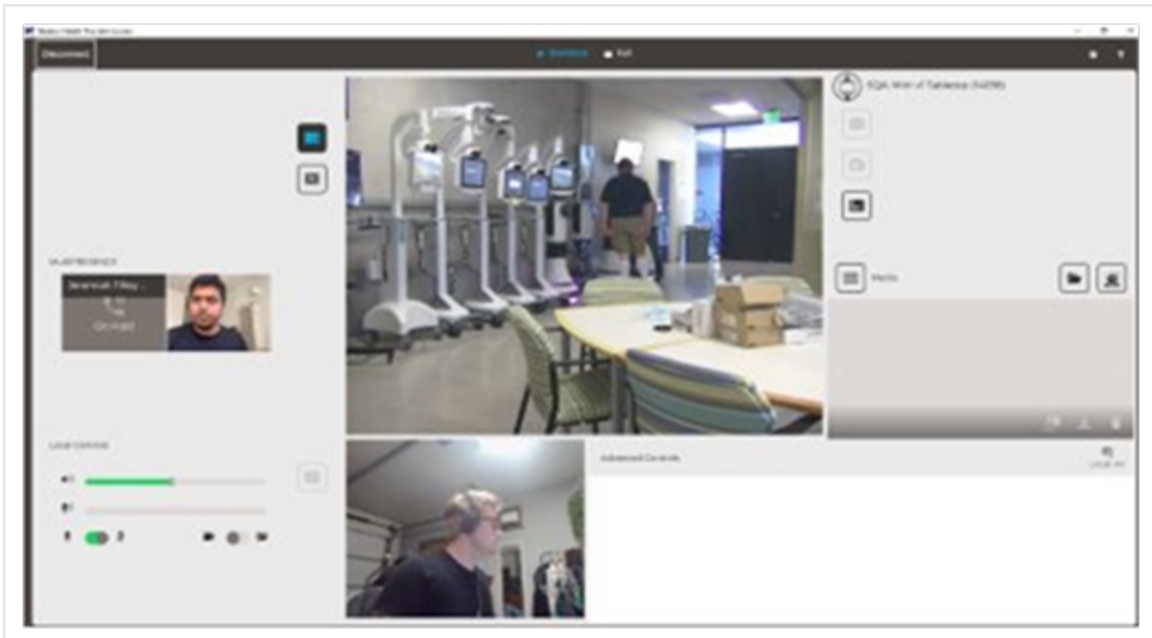

Robot screenshot

iOS Viewpoint screenshot

A user joining from a Windows PAS will be presented with an **On-hold** message similar to this screenshot. The host cannot transfer the host role to the user **On-hold**.

A user joining from a iOS PAS will be presented with an **On-hold** message similar to this screenshot. The host cannot transfer the host role to the user **on-hold**.
