Release Notes for May 16, 2023

The following is a list of features included in this software release. Clients can request a feature be enabled in their production organization by contracting our Technical Assistance Center.

General Application Improvements

This release includes various bug, performance, maintenance fixes that improve the stability and performance of the application. We have addressed several issues reported by our users. This release also includes several performance and technology updates to ensure that our software remains compatible with the latest operating systems and hardware.

Release Notes

Browser Support: IDA/Electron, Chrome, Safari-MAC, Firefox, and Edge.

Solo Platform

User experience enhancement:

The following default data fields were removed from the Report Generator as they were redundant (repetitive):

- Total A/V Duration
- First A/V session start date time
- Join Times
- Disconnect Times
- Last A/V Session end date time

These fields can now be selected as part of the Encounter Video Session Details section of the Report Generator.

Key	Component	Version	Operating System	
SOG-195	Report Generator	2023.1.5	Windows - 32 and 64 bit, and Mac	
Release Feature Toggle: UnifiedSoloReporting2023Q1				

User experience enhancement:

The assigned Smart Notes template name is displayed in each column header before each data field to make it easier for customer administrators running reports to know which template the data field corresponds to. This can help save time and reduce confusion, especially for users who are managing multiple templates. It also ensures that the data is organized and labeled clearly and consistently, improving reports' accuracy and reliability.

Key	Component	Version	Operating System	
SOG-19	Report Generator	2023.1.4	Windows - 32 and 64 bit, and Mac

In a Smart Notes 4.0 form, customers can display lengthy questions for users to respond to. Lengthy questions can often reach over 200+ characters. When administrative users export their data from the Report Generator and import data into their third-party healthcare analytics software (e.g., REDCap, MS Power BI, Tableau, Oracle Analytics Cloud), the lengthy column headers often result in failed imports, causing inefficiency and dissatisfaction. The column header characters have been limited to 100 characters to address customer concerns.

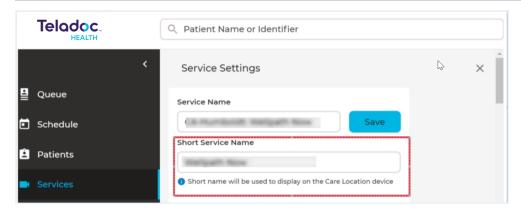

Key	Component	Version	Operating System	
SOG-18	Report Generator	2023.1.5	Windows - 32 and 64 bit, and Mac	
Release Feature Toggle: UnifiedSoloReporting2023Q1				

User experience enhancement:

The Service Short Name entered in Service Settings is now available in the Report Generator and is exportable.

Key	Component	Version	Operating System
SOG-17	Report Generator	2023.1.3	Windows - 32 and 64 bit, and Mac

Release Feature Toggle: UnifiedSoloReporting2023Q1

The name of the calculator is now appended to the beginning of each total score column header to clearly display which calculator was used to generate results and the total score.

Key	Component	Version	Operating System	
SOG-16	Report Generator	2023.1.5	Windows - 32 and 64 bit, and Mac	
Release Feature Toggle: UnifiedSoloReporting2023Q1				

User experience enhancement:

New optional demographic fields were added. If utilized, these will also persist to the Report Generator: Religion, Birthplace, Nationality, and Citizenship

The Report Generator now includes the patient's address as a new item. To enable this feature, users can access the "Demographics" section of the report. The address format consists of Address Line 1, Address Line 2, City, State, Postal Code, and Country, listed in that order. If a patient has multiple addresses, they will be separated by commas in the report.

A new option called "Solo Tenant ID" has been added to the Report Generator. This option helps to identify the specific tenant (organization) that is associated with the practice you are working in. The "Solo Tenant ID" is located in the "Encounter Details" section of the report. The field stores the relevant tenant ID information for each encounter.

Provider App

User experience enhancement:

We are excited to announce the release of our new mobile documentation solution designed to support on-the-move physician users in healthcare environments. Here are the key benefits of this solution:

- Seamless Documentation: Our solution enables physicians to document patient encounters seamlessly on their iOS mobile devices within the Safari web browser while they are on the move, regardless of their location. This reduces the time spent on documentation and improves the accuracy of the notes.
- Improved Workflow: With our solution, physicians can easily switch between patient encounters, take stroke calls, while on the move from their clinics to surgery without losing their place in the documentation process. This improves their workflow and saves them valuable time.
- Increased Accessibility: Our solution is accessible from any current versions of iOS mobile devices (see below) with an internet connection, allowing physicians to document patient encounters from anywhere. This makes it easier for physicians to work remotely and reduces the need for them to be physically present in the hospital or clinic.
- Versatile Use: Our solution is not limited to emergent stroke physicians and can be leveraged by any service line and virtual visit. This makes it a valuable tool for a wide range of healthcare providers and situations.

We believe that our mobile documentation solution will revolutionize the way physicians document patient encounters on the move. It will improve their workflow, reduce errors, and increase accessibility, ultimately leading to better patient outcomes.
