

Teladoc Health™

Bi-Monthly Release Notes

Release Notes for March 28, 2023

The following is a list of features included in this software release. Clients can request a feature be enabled in their production organization by contracting our Technical Assistance Center.

General Application Improvements

This release includes various bug, performance, maintenance fixes that improve the stability and performance of the application. We have addressed several issues reported by our users. This release also includes several performance and technology updates to ensure that our software remains compatible with the latest operating systems and hardware.

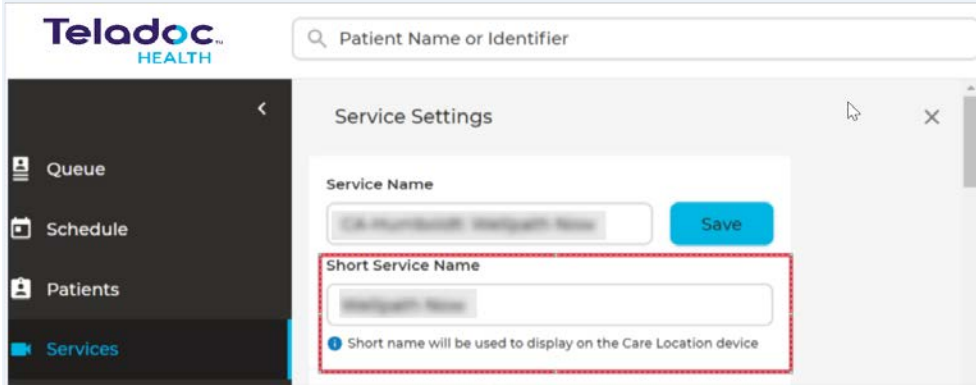

Release Notes

Browser Support: IDA/Electron, Chrome, Safari-MAC, Firefox, and Edge.

Solo Platform

User experience enhancement:

The Service Short Name entered in Service Settings is now available in the Report Generator and is exportable.

Key	Component	Version	Operating System

- Calendar element now supports accessibility requirements.

Key	Component	Version	Operating System
SOG-31	Web Provider App, Front-end	2023.1.3	Windows - 32 and 64 bit, and Mac
Release Toggle: NO			

User experience enhancement:

In projects where patients are enrolled in a longer-term care pathway or episode of care spanning multiple virtual visits, documents, and activities, it is imperative for users to be able to track the patient's progress within the overall episode of care.

To address this need, we have implemented the Episode of Care feature, which can be enabled within the Practice Settings by turning on the designated "Episode of Care" setting.

This feature currently supports initial use cases, such as Remote Patient Monitoring and Autism review, with the ability to add additional Episode of Care Types upon request. By leveraging this feature, healthcare providers can effectively manage their patients' care journeys and provide high-quality care throughout the entire duration of the patient's episode of care.

Key	Component	Version	Operating System
HHINT-290	Provider App	2023.1.3	Windows - 32 and 64 bit, and Mac
Release Toggle: NO			

Smart Notes

User experience enhancement:

As a Provider, you can now tag a reference field in a SN4 template so the inputted data is automatically filled out in another SN4 templates within one visit. This will allow you to save time on populating the same data for the same fields in several SN4 templates within one visit. This can be done when a provider adds two Smart Note templates that each contain a ReferenceField tag. The provider can then proceed with filling out one template and the second one will automatically be filled out if the ReferenceField tag was used.

Key	Component	Version	Operating System
HHSINT-285	Smart Notes	2023.1.2	Windows - 32 and 64 bit, and Mac
Release Toggle: No
